

Student Enrollment & Course Management System (SECMS)

A Salesforce Application for Academic Enrolment & Course Management

Project Report

1. Introduction

1.1 Project Overview

This project is designed to bring **student, course, and enrollment information** together in a single Salesforce application, providing easy access to data, organized workflows, and accurate reporting. It enables Enrollment Officers to efficiently manage **student admissions, course registrations, and communication**, while giving instructors and administrators clear visibility into course assignments, student enrollments, and academic progress.

The system also simplifies enrollment management through **automated instructor assignment, task creation, data validation, and multi-level approval processes**. These features help reduce manual work, minimize errors, and ensure that enrollment activities are completed smoothly and efficiently.

By using **Salesforce Flows, Approval Processes, Validation Rules, Reports, and Dashboards**, the organization can manage the complete enrollment journey in a structured and systematic manner—from student admission to course completion. The system also provides valuable insights into key areas such as **enrollment volume, revenue, student status, course participation, and pending approvals**, helping administrators monitor performance and make informed decisions.

1.2 Purpose

Purpose of the System

The main purpose of SECMS is to make the student enrollment process simple, fast, and organized using Salesforce.

The system helps to:

- Store student and course details in one place.
- Manage student enrollments easily.
- Automate approvals and validations.
- Reduce manual work and errors.
- Track enrollment activities.
- Generate simple reports and dashboards.
- Improve communication between staff and instructors.

2. Ideation Phase

2.1 Problem Statement (Customer Problem Statement Template)

PS-1: Enrollment Officer

The Enrollment Officer needs to manage student enrollments efficiently, but the data is scattered and the process is mostly manual, which makes the work difficult and prone to errors.

PS-2: Administrator

The Administrator needs to track enrollments and revenue, but the data is not centralized and reports are delayed, making it difficult to make quick and accurate decisions.

PS-3: Instructor

The Instructor needs to view assigned courses and student details, but the information is not easily available, making course management more difficult.

PS-4: Enrollment Officer

The Enrollment Officer needs to process enrollments quickly, but manual approval processes cause delays and make the enrollment process less efficient.

2. Ideation Phase

Fig 2.1 — Customer problem statement canvas

2.2 Empathy Map Canvas

User Persona: Enrollment Officer

- ❖ Think & Feel: Worried about duplicate bookings and payment issues.
- ❖ Hear: Feedback and complaints from students and management.
- ❖ See: Different spreadsheets, emails, and student records.
- ❖ Say & Do: Checks information and follows up with students manually.
- ❖ Pain: Duplicate data, delays in approvals, and manual work.
- ❖ Gain: Automated processes, clear dashboards, and faster enrollment management.

Fig 2.2 — Empathy map canvas for the Enrollment Officer persona

Brainstorming & Idea Prioritization

Step-1 Brainstorm ideas

- Step Spreadsheet-based automation
- Standalone student enrollment portal
- ERP system integration
- Salesforce-based enrollment management system

Step 2 – Grouping of Ideas

- Manual-based solutions

- Semi-automated solutions
- Fully automated cloud-based solutions

Step 3 – Idea Prioritization

- ❖ The ideas were prioritized based on automation, scalability, ease of use, cost, and integration capabilities.
- ❖ Salesforce-based Enrollment Management System – High Priority
- ❖ ,ERP Integration – Medium Priority
- ❖ Standalone Enrollment Portal – Medium Priority
- ❖ Spreadsheet Automation – Low Priority

2.3 Brainstorming & Idea Prioritization

Fig 2.3 — Brainstorming, grouping, and prioritization of solution ideas

For your SECMS project, you can write it like this:

1. Grouping: The solution ideas were grouped into manual, semi-automated, and fully automated solutions.
2. Prioritization: The ideas were prioritized based on cost, ease of implementation, scalability, automation, and user benefits.
3. Selected Solution: The Salesforce-based enrollment system was selected as the preferred solution because it provides centralized data management and automation.

3.REQUIREMENT ANALYSIS PHASE

3.1 Customer Journey Map

Stages covered:

For your Student Enrollment & Course Management System (SECMS), you can change the sentences like this:

- ❖ Admission & Registration – Students provide their details and complete the registration process.
- ❖ Course Selection – Students explore and select the required courses.
- ❖ Enrollment Request – Students submit a request to enroll in the selected course.
- ❖ Fee Payment – Students complete the required fee payment.
- ❖ Approval – The enrollment request is reviewed and approved by the Instructor
Assignment – An instructor is assigned to the enrolled course.
- ❖ Instructor Assignment – An instructor is assigned to the enrolled course.
- ❖ Progress Tracking & Completion – Student progress is monitored until successful course completion.

3.2 Solution Requirements

Functional Requirement

FR-1 : Student Management

The system shall allow administrators to create, view, update, and manage student records.

FR-2: Course Management

The system shall allow authorized users to create, update, view, and manage course details.

FR-3: Enrollment Processing

The system shall allow users to submit, approve, or reject student enrollment requests.

FR-4: Instructor Management

The system shall allow administrators to create, assign, and manage instructor details and course assignments.

FR-5: Payment Management

The system shall allow users to record, track, and manage student fee payment details.

Non-Functional Requirements

NFR-1: Usability

The system shall provide a simple and user-friendly interface that allows users to perform tasks easily with minimal training.

- Easy student registration
- Simple enrollment process
- Clear and role-based dashboards

NFR-2: Security

The system shall protect student and institutional data through secure authentication and role-based access control.

- Only authorized users can access the system
- Only administrators can modify course details
- Instructors can view only assigned student records
- Students cannot access other students' records

NFR-3: Reliability

The system shall work consistently and accurately without errors during enrollment, approval, and report generation. It shall prevent duplicate or incorrect course enrollments.

- Prevent duplicate course registration.
- Update enrollment status accurately after approval.
- Generate reports consistently and accurately.

NFR-4: Performance

The system shall provide fast response times for all operations and ensure smooth system performance, especially during peak admission periods.

- Quickly load dashboards and reports.
- Process enrollment requests without unnecessary delays.

NFR-5: Scalability

The system shall support an increasing number of students, courses, departments, and users without affecting system performance. It should also allow new modules and features to be added easily.

- Add new departments without redesigning the system.
- Handle increased student admissions every year.
- Support future mobile or portal integration.

NFR-6: Availability

The system shall be available to users during working hours and minimize downtime. It should provide reliable access for academic and administrative activities.

- Provide 24/7 access to the system.
- Minimize system downtime.
- Ensure reliable access for users.

3.3 Data Flow Diagram

- Users enter student, course, and enrollment details into the system.
- The system checks the entered information and saves it in Salesforce.
- Enrollment requests are sent for approval based on the required process.
- The system assigns instructors to approved courses or enrollments.
- The processed information is used to create reports and dashboards.
- Administrators can use these reports to monitor enrollments and overall perform.

Overall, the system collects enrollment information, checks the data, manages approvals, assigns instructors, and provides useful reports for monitoring.

Fig 3.3 — Data flow diagram for SECMS

3.4 Technology Stack

The application's architecture utilizes Salesforce Lightning for the UI layer, Salesforce Flows for business logic, Salesforce Objects for the database, Validation Rules and Approval Processes for automation, and Reports & Dashboards for reporting.

- ❖ **UI:** Built using Salesforce Lightning.
- ❖ **Logic:** Powered by Salesforce Flows.
- ❖ **Database:** Structured using Salesforce Objects.
- ❖ **Automation:** Handled via Validation Rules and Approval Processes.
- ❖ **Reporting:** Delivered through Reports & Dashboards.

4. Project Design Phase

4.1 Problem–Solution Fit

SECMS directly addresses fragmented enrollment workflows by aligning user behavior, constraints, and automation using Salesforce-native capabilities.

Fig 4.1 — Problem–solution fit mapped through Salesforce

4.2 Proposed Solution

Problem: The problem is manual enrollment handling.

Solution: The solution is Salesforce-based SECMS.

Novelty: The novelty lies in end-to-end automation.

Social Impact: The social impact is an improved student experience.

Revenue Model: The revenue model is based on institutional deployment.

Scalability: Scalability is achieved through multi-department support.

4.3 Solution Architecture

The system is built on Salesforce and combines data management, automation

reporting, and security features to support the enrollment process.

- ❖ **Objects:** Manage Student, Course, Enrollment, and Instructor information.
- ❖ **Automation:** Uses Flows and Approval Processes to automate tasks and approvals.
- ❖ **Reporting:** Uses Reports and Dashboards to monitor enrollment activities and performance.
- ❖ **Security:** Uses Profiles, Permission Sets, and Sharing Rules to control data access.

Fig 4.3 — Solution architecture: objects, automation, and security layers

5. Project Planning & Scheduling

The project follows an **Agile approach**, where the work is divided into **Epics, User Stories, and Story Points**. Development is completed in **Sprints**, with the **Product Backlog** used to manage tasks, the **Sprint Schedule** used to plan activities, and **Velocity** used to estimate the work completed in each sprint.

The **Student Enrollment & Course Management System** follows an **Agile methodology**. The project is divided into small tasks and completed through **sprints**.

Planning: Identify project requirements and create the Product Backlog.

Estimation: Use Story Points to estimate task effort.

Scheduling: Plan tasks and activities for each sprint.

Execution: Complete development sprint by sprint.

Tracking: Use Sprint Reviews and Velocity to monitor progress.

Product Backlog, Sprint Schedule, and Estimation

Sprint	Epic	USN	User Story / Task	SP	Priority	Team Member
Sprint-1	Developer Setup	USN-1	As a system administrator, I want to create a Salesforce developer account so that I can configure and deploy the Student Enrollment system.	1	High	Member1
Sprint-1	Data Modeling	USN-2	As an admin, I want to create custom objects for Student, Course, Enrollment, and Instructor so that academic data can be stored and managed efficiently.	3	High	Member2
Sprint-2	Data Modeling	USN-3	As a user, I want dedicated tabs for each object so that I can easily navigate between students, courses, enrollments, and instructors.	3	High	Member3
Sprint-2	Data Modeling	USN-4	As an admin, I want to create relevant fields such as student details, course	5	High	Member4

			information, and enrollment status so that complete records can be captured accurately.			
Sprint-2	Data Modeling	USN-5	As an enrollment officer, I want a centralized Lightning App so that I can access all academic operations from one interface.	3	High	Member4
Sprint-2	Data Modeling	USN-6	As an admin, I want to define relationships between students, courses, and enrollments so that the system can logically link and track academic activities.	5	Medium	Member1
Sprint-2	Data Modeling	USN-7	As a user, I want customized page layouts so that only relevant information is displayed, improving clarity and ease of data entry.	5	High	Member2
Sprint-3	Automation	USN-8	As a system, I want to validate input data such as mandatory fields and enrollment limits so that incorrect or incomplete records are prevented.	3	High	Member4
Sprint-3	Automation	USN-9	As a system, I want automated flows to handle enrollment processing and notifications so that manual effort is reduced and processes become faster.	3	High	Member4
Sprint-3	Automation	USN-10	As an administrator, I want an approval process for enrollment requests so that registrations are verified before confirmation.	5	High	Member1
Sprint-4	Security	USN-11	As an admin, I want to configure role-based security so that users can only access data relevant to their responsibilities.	5	High	Member2
Sprint-5	Reports	USN-12	As a manager, I want reports on student enrollments, course registrations, and instructor assignments so that I can monitor academic operations.	4	High	Member3

Sprint-6	Dashboards	USN-13	As a manager, I want visual dashboards showing enrollment statistics and trends so that I can quickly analyze system performance.	4	Medium	Member4
----------	------------	--------	---	---	--------	---------

Project Tracker, Velocity & Burndown Chart

Sprint	Total SP	Duration	Start Date	End Date (Planned)	SP Completed	Release Date (Actual)
Sprint-1	20	6 Days	24 Oct 2022	29 Oct 2022	20	29 Oct 2022
Sprint-2	20	6 Days	31 Oct 2022	05 Nov 2022	-	-
Sprint-3	20	6 Days	07 Nov 2022	12 Nov 2022	-	-
Sprint-4	20	6 Days	14 Nov 2022	19 Nov 2022	-	-

6. Project Development Phase

Project Flow

1. Milestone 1: Salesforce Developer Account Creation
2. Milestone 2: Custom Object Creation (Student, Course, Enrollment, Instructor)
3. Milestone 3: Tabs Creation
4. Milestone 4: Lightning App Creation
5. Milestone 5: Fields Creation
6. Milestone 6: Create Relationships
7. Milestone 7: Page Layout Customization
8. Milestone 8: Validation Rules
9. Milestone 9: Flows (Automation)
10. Milestone 10: Approval Process
11. Milestone 11: Reports
12. Milestone 12: Dashboards
13. Milestone 13: Security Setup
14. Milestone 14: Conclusion

What You'll Learn

1. Real-time Salesforce project implementation
2. Designing custom objects and relationships
3. Creating page layouts & record types
4. Writing validation rules
5. Building automation with flows
6. Creating approval workflows
7. Developing reports & dashboards

8. Setting up security with profiles, permission sets, and sharing
9. End-to-end application testing

Milestone 1 – Salesforce Developer Account Setup

Salesforce is a customer success platform designed to help organizations sell, service, market, analyze, and connect with their customers. Using standard products and features, it enables management of relationships with prospects and customers, collaboration with employees and partners, and secure cloud data storage.

Activity 1: Creating Developer Account

Creating a developer org in Salesforce. Go to <https://developer.salesforce.com/signup> and enter the following details on the sign-up form:

- First name & Last name
- Email
- Role: Developer
- Company: College Name
- Country: India
- Postal Code: Pin code
- Username: a combination of name and company (need not be an actual email id, in the format username@organization.com)

Click Sign Me Up after filling these details.

Fig 6.1 — Salesforce Developer Edition sign-up page

Activity 2: Account Activation

1. Go to the inbox of the email used while signing up and click Verify Account to activate the account (may take 5–10 minutes).
2. Click Verify Account.
3. Set a password, answer a security question, and click Change Password.
4. You will be redirected to the Salesforce Setup page.

Milestone 2 – Objects

Activity 1: Creating the Student Object

The purpose of creating the Student custom object is to store and manage information about students such as their personal details, contact information, and enrollment status.

To create the Student object:

1. Go to the Setup page.
2. Click on Object Manager.
3. Click on Create → Custom Object.
4. Enter Label: Student, Plural Label: Students, Object Name: Student.
5. Record Name: Student Name, Data Type: Text.

6. Under Optional Features, select Allow Reports, Allow Activities, Track Field History.
7. Under Search Status, select Allow Search.
8. Click Save.

In the same way, create the Course, Instructor, and Enrollment objects.

Milestone 3 – Fields

Table 1: Student Object Fields

Field Label	Data Type
Student Name	Text (Standard)
Email	Email
Phone	Phone
Date of Birth	Date
Student Status	Picklist
Address	Text Area

Table 2: Course Object Fields

Field Label	Data Type
Course Name	Text (Standard)
Category	Picklist
Duration	Number / Text
Course Fee	Currency
Description	Text Area

Table 3: Instructor Object Fields

Field Label	Data Type
Instructor Name	Text (Standard)
Instructor Code	Text
Expertise	Picklist
Phone	Phone
Email	Email

Table 4: Enrollment Object Fields

Field Label	Data Type
Student	Lookup (Student)
Course	Lookup (Course)
Instructor	Lookup (Instructor)
Enrollment Date	Date
Enrollment Status	Picklist
Fees Paid	Checkbox
Total Amount	Currency
Comments	Text Area

Milestone 4 – Create Relationships

Activity 1: Create Lookup from Enrollment to Student

1. Go to Setup → Object Manager.
2. Type Enrollment in Quick Find → click Enrollment__c object.
3. Click Fields & Relationships → click New.
4. Select Lookup Relationship → click Next.
5. For Related To, select Student__c → click Next.
6. Enter Field Label: Student (API Name: Student__c).

7. Click Next through Field-Level Security and Layout options (ensure it's visible and added to layout).
8. Click Save.

Activity 2: Create Lookup from Enrollment to Course

Purpose: To link each Enrollment to a Course.

1. Go to Setup → Object Manager → Enrollment__c.
2. Click Fields & Relationships → New.
3. Select Lookup Relationship → Next.
4. Related To: select Course__c → click Next.
5. Field Label: Course (API Name: Course__c).
6. Click Next (set visibility and layout) → Save.

Activity 3: Create Lookup from Enrollment to Instructor

Purpose: To store which Instructor is assigned to a particular Enrollment.

1. Go to Setup → Object Manager → Enrollment__c.
2. Click Fields & Relationships → New.
3. Choose Lookup Relationship → Next.
4. Related To: select Instructor__c → Next.
5. Field Label: Instructor (API Name: Instructor__c).
6. Complete Field-Level Security and Page Layout options → Save.

Milestone 5 – Validation Rules

Activity 1: Student Email Domain Validation

Purpose: To ensure students use only allowed institutional email addresses.

1. Go to Setup → Object Manager → Student__c.
2. Click Validation Rules → New.

3. Rule Name: Student_Email_Domain_Validation.
4. Error Condition Formula (example for @student.edu): NOT (CONTAINS (Email-c, "@student.edu"))
5. Error Message: Email must be a valid student institutional email.
6. Error Location: Field → Email-c.
7. Click Save.

Activity 2: Fees Must Be Paid Before Approval

Purpose: Prevent Enrollment from being approved until fees are paid.

1. Go to Setup → Object Manager → Enrollment__c.
2. Click Validation Rules → New.
3. Rule Name: Fees_Must_Be_Paid_Before_Approval.
4. Error Condition Formula: AND (ISPICKVAL (Enrollment-Status-c, "Approved"), Fees-Paid-c FALSE)
5. Error Message: Fees must be paid before approving an enrollment.
6. Error Location: Top of Page (or field as needed).
7. Click Save.

Milestone 6 – Approval Process

Activity 1: Create Approval Process for Enrollment Requests

Purpose: Route Enrollment requests to Training Manager for approval or rejection.

1. Go to Setup → Approval Processes → select Enrollment__c.
2. Click Create New Approval Process → Use Standard Setup.
3. Process Name: Approval_Enrollment_Request.
4. Entry Criteria: Enrollment_Status__c = "Requested".
5. Save and configure steps.
6. Add Approval Step with Approver: specific Training Manager user.

7. Under Final Approval Actions, add Field Update to set Enrollment_Status__c = "Approved".
8. Under Final Rejection Actions, add Field Update to set Enrollment_Status__c = "Rejected".
9. Add Email Alert to send rejection email to student.
10. Activate the approval process.

Milestone 7 – Tabs

Activity 1: Creating a Tab for the Student Object

1. Go to Setup, type Tabs in Quick Find.
2. Under Custom Object Tabs, click New.
3. Select Student from the object list.
4. Choose a tab style (icon).
5. Click Next, assign it to all profiles, and then click Save.

Activity 2: Creating Remaining Tabs

Now create the Tabs for the remaining objects: Courses, Instructors, and Enrollment, following the same steps as mentioned in Activity 1.

Milestone 8 – The Lightning App

Activity 1: Creating the Lightning Application for the Project

Navigate to Setup, enter App Manager in the Quick Find search box, and click New Lightning App.

Provide the app details:

- App Name: Student Enrollment & Course Management
- Developer Name: auto-fills
- Description: Optional, describing the purpose of the app

Click Next and configure App Branding, Navigation Style (Standard Navigation), assign the app to profiles (Admin, Enrollment Officer, Instructor), and add the following navigation items:

1. Student
2. Course
3. Instructor
4. Enrollment
5. Reports
6. Dashboards
7. Home
8. Tasks

Review the app settings and click Save & Finish.

Milestone 9 – Page Layouts and Record Types

Activity 1: Create Record Types for Enrollment

Purpose: To separate New Enrollment vs Re-Enrollment processes.

1. Go to Setup → Object Manager → Enrollment__c.
2. Click Record Types → New.
3. For the first record type: Existing Record Type: Master; Record Type Label: New Enrollment; enable for required profiles (Admin, Enrollment Officer); select the default Page Layout → Save & New.
4. For the second record type: Record Type Label: Re-Enrollment; enable for same profiles; select the default Page Layout → Save.

Activity 2: Separate Page Layouts for Each Enrollment Record Type

Purpose: To show different fields for New Enrollment vs Re-Enrollment.

1. Enrollment__c object → click Page Layouts.

2. Click New to create a layout for New Enrollment: clone from existing Enrollment Layout, name it New Enrollment Layout, keep fields relevant for first-time enrollment (Student, Course, Instructor, Enrollment Date, Status, Fees), remove unnecessary re-enrollment fields, click Save.
3. Click New to create Re-Enrollment Layout: clone existing layout, name it Re-Enrollment Layout, include fields like previous Enrollment reference, Re-Enrollment Reason, Status, Fees, click Save.
4. Click Page Layout Assignment → Edit Assignment.
5. For each profile and record type: New Enrollment → use New Enrollment Layout; Re-Enrollment → use Re-Enrollment Layout. Click Save.

Activity 3: Add Enrollment Related Lists to Parent Objects

Purpose: To see all Enrollments from Student, Course, and Instructor records.

- Student → Enrollment Related List: Setup → Object Manager → Student__c → Page Layouts → open the main layout → drag Enrollments related list onto the layout → customize columns → Save.
- Course → Enrollment Related List: Object Manager → Course__c → Page Layouts → open layout → add Enrollments related list → Save.
- Instructor → Enrollment Related List: Object Manager → Instructor__c → Page Layouts → open layout → add Enrollments related list → Save.

Milestone 10 – Automation with Flow

Activity 1: Auto-Populate Enrollment Date (Record-Triggered Flow)

Purpose: Set Enrollment-Date-c to today when Enrollment is created.

1. Go to Setup → Flows → New Flow.
2. Select Record-Triggered Flow → Create.
3. Object: Enrollment__c.
4. Trigger: A record is created.

5. Optimize for Actions and Related Records → Done.
6. Add Update Records element: Label: Set Enrollment Date; use the record that triggered the flow; Field: Enrollment-Date-c → Value: \$Flow-Curren-Date.
7. Save as SetEnrollment-Date → Activate.

Activity 2: Send Email When Enrollment Approved

Purpose: When Enrollment_Status__c = Approved, send email, alert admin, and set Student to Active.

1. Create Email Template and Email Alert for student notification.
2. Go to Flows → New → Record-Triggered Flow.
3. Object: Enrollment__c, Trigger on update, Condition: Enrollment_Status__c Equals "Approved".
4. Add Get Records to fetch related Student__c.
5. Add Action (Email Alert) to send email to student.
6. Add Action to notify Admin if needed.
7. Add Update Records to set Student-c-Status-c = "Active".
8. Save as Enrollment Approved Action → Activate.

Activity 3: Auto-Assign Instructor Based on Course Category

Purpose: Assign Instructor automatically based on Course category. Rules: Technical → Instructor A; Language → Instructor B; Non-Technical → Instructor C.

1. Prepare Instructor__c records with codes (e.g., INSTR_A, INSTR_B, INSTR_C).
2. Create Record-Triggered Flow on Enrollment__c (created/updated).
3. Add Get Records to fetch related Course__c.
4. Add Decision element on Courser-Category-c: Technical / Language / Non-Technical outcomes.
5. For each outcome, get the Instructorrecord (A/B/C) based on code or name.
6. Update Records: set Instructor__c = Get-Instructor-X-Id.

7. Save as Auto-Assign-Instructor → Activate.

Activity 4: Auto-Create Task for Follow-Up

Purpose: When Enrollment is "Requested", create a follow-up task for Admin.

1. Create Record-Triggered Flow on Enrollment__c.
2. Trigger: Record created or updated; condition Enrollment_Status__c = "Requested".
3. Add Get Records to fetch Admin user (by Username / Profile).
4. Add Formula (Date): TODAY () + 2 for due date.
5. Add Create Records for Task with Subject: Follow up on enrollment request; Owner Id: Admin user Id; What Id: Enrollment Id; ActivityDate: formula Today + 2.

Save as Create-Follow up -Task → Activate.

Milestone 11 – Reports

Activity 1: Create "Students by Status" Report

1. Go to Reports → New Report.
2. Report Type: Students.
3. Group rows by Status-c.
4. Add columns as needed (Name, Email, Phone).
5. Save as Students by Status.

Activity 2: Create "Enrollments by Course" Report

1. New Report → Report Type: Enrollments.
2. Group rows by Course-r. Name.
3. Show Record Count per course.
4. Save as Enrollments by Course.

Activity 3: Create "Pending Enrollment Approvals" Report

1. New Report → Enrollments report type.
2. Filter: Enrollment_Status__c = "Requested".
3. Add columns (Student, Course, Owner, Created Date).
4. Save as Pending Enrollment Approvals.

Activity 4: Create "Revenue Report (Fees Paid)" Report

1. New Report → Enrollments report type.
2. Filter: Fees-Paid-c = TRUE.
3. Group by Course-r-Name.
4. Summarize Course-Fee__c or similar fee field.
5. Save as Revenue Report – Fees Paid.

Milestone 12 – Dashboards

Activity 1: Create "Student Management Dashboard"

1. Go to Dashboards → New Dashboard.
2. Name: Student Management Dashboard.
3. Select folder → Create.
4. Select new Dashboard folder and Save.

Add components:

- Donut Chart → using Students by Status report
- Bar Chart → using Enrollments by Course report
- Gauge → using Revenue Report – Fees Paid (sum of revenue field)
- Table → using Pending Enrollment Approvals report

Arrange components on canvas. Click Save → Done.

Milestone 13 – Security Setup

Activity 1: Configure Profiles

Profiles required:

- Admin – Full access
- Enrollment Officer – Create/Update Enrollments
- Instructor – Read-only access to assigned Enrollments

Steps (example for Enrollment Officer):

1. Name: Enrollment Officer.
2. In Object Settings: Enrollment__c – Read, Create, Edit; Student__c / Course__c – Read (and Edit if required).
3. Save.
4. Repeat similarly for the Instructor profile with Read-Only access on Enrollments.

Activity 2: Create Permission Sets

1. Go to Setup → Permission Sets → New.
2. Create Custom Object Access (additional access to project objects if needed).
3. Create Dashboard Editor (Create/Customize Reports & Dashboards permissions).
4. Assign to relevant users.

Activity 3: Configure Sharing & OWD

1. Go to Setup → Sharing Settings.
2. Set Organization-Wide Defaults: Students (Student__c) – Public Read/Write; Courses (Course__c) – Public Read/Write; Enrollments (Enrollment__c) – Private.
3. Save.

For Instructor access to assigned Enrollments, optionally add a User lookup on Enrollment (Instructor User) and use a simple Record-Triggered Flow to set OwnerId = Instructor User so they can see only their own records.

7.FUNCTIONAL & PERFORMANCE TESTING

During the testing phase, screenshots were captured from the Salesforce user interface to verify the proper functioning of all implemented features within the Student Enrollment & Course Management System (SECMS). These features include Record Creation: Successful creation of student, course, instructor, and enrollment records Validation Rules: Verification of mandatory fields, eligibility criteria, and enrollment. Evaluation of system behavior across different course categories.Process Automation: Flow execution for automated enrollment approvals and seat availability checks Apex Triggers: Verification of trigger functionality to ensure automatic confirmations and real-time record updates,Additionally, screenshots of generated reports and dashboards were documented to validate accurate data visualization, enrollment tracking, and performance monitoring.All screenshots captured during testing must be submitted along with this report.Functional & Performance Testing

8.Advantages & Disadvantages Data:

Advantages

- **Centralized Data:** All student and course information is stored in one place.
- **Automation:** Reduces manual work through automated workflows.
- **Real-Time Reports:** Provides quick access to updated reports and dashboards.

Disadvantages

- ❖ **Salesforce Dependency:** The system depends on the Salesforce platform.
- ❖ **Initial Setup:** Requires time and effort for configuration and customization.

8. Conclusion

The Student Enrollment & Course Management System (SECMS) provides a centralized and efficient way to manage student records, courses, enrollments, instructors, and approvals. It reduces manual work and errors through Salesforce automation, improving data accuracy and overall management efficiency. The Salesforce Student Enrollment & Course Management System successfully streamlines the entire student academic lifecycle—from student registration and course creation to enrollment management, instructor assignment, approvals, revenue tracking, and reporting. By leveraging Salesforce's automation tools such as validation rules, flows, approval processes, and dashboards, the system improves data accuracy, operational efficiency, and decision-making. This project demonstrates how Salesforce can transform manual academic processes into a scalable, reliable, and user-friendly digital solution.
